

## MicroNet – 1-Way Satellite Internet Skybird SatDSL

Super Fast Broadband via Satellite, available anywhere in Middle East right now

### About us

MicroNet Broadband is located in London, United Kingdom & offers its satellite internet services to a network of world-wide resellers & Also direct to end users. MicroNet has been supplying satellite broadband services worldwide since 2003

### Get Broadband Anywhere!

MicroNet SkyDSL Premium+ enables you to get up to 16Mbit/s Unlimited Broadband speed anywhere in Middle East & North Africa.

**Prices from just 24.90 € Euros per month**

#### Setup in 4 Easy Steps!

##### 1. Satellite Dish ->

you need a standard Digital TV type satellite dish & Digital LNB properly aligned to the satellite to receive the data (you can use our easy align compass, guide & aid of the signal bar in the satellite modem to align the dish yourself, or contact your local satellite TV installer) For the size of your dish please see the coverage Maps on the next page.

**2. DVB Satellite Modem ->** You also need any kind of Satellite modem There 3 kinds of modem available to buy from us (USB or Ethernet or PCI), but our service supports all common satellite DVB-S modems such as the Technisat SkyStar2 or Technotrend. The best option to go for if plan to have a Wifi network is the Ethernet box, this comes pre-configured with all settings and once the dish is aligned it will easily plug directly into a Wireless or Wired LAN network

**3. Uplink Connection ->** You need any internet connection (dial-up, GPRS, ADSL or 2way satellite) to send data to the Internet (you need to be connected all the time you use the satellite). You can use any Internet Service Provider. Once setup you will receive data (websites, files, email etc) straight on your PC via satellite at blistering speeds.

**4. Buy An Account ->** Contact us to buy an account, we accept all common payment methods such as Visa, Mastercard, Paypal, Money Bookers etc. Once you purchase an account we will send you an activation key that you simply enter into the Software and the wizard will do the rest for you.

#### Uses:

For Internet Cafes & Offices who want to increase the Downlink Speed of their Network
